Compact and cost-effective production for Single/Twin-Cavity PET/PP bottles

WEI LI to present WL-MP02 Fully/Semi Automatic PP Reheat Stretch Blow Moulding Machine in Düsseldorf - K'2007.

At the K' 2007 SHOW to be held in Düsseldorf from Oct 24 ~ 31, 2007, Wei Li Plastics will be exhibiting a newly developed 1/2-cavity PET/PP reheat stretch blow moulding machine. The machine on show will be a WL-MP02 STANDARD Model equipped with a 1-cavity blow mould to produce 500ml PP sport bottles.

The WL-MP02 STANDARD Model is designed for 1/2-cavity bottle production with body diameter up to 90mm. There are optional features such as automatic preform feeder and bottle ejector available for selection.

The standard equipment of the WL-MP02 includes dual moving platens which ensure excellent, sustained parallelism of the mould clamping platen coupled with the shortest cycle times.

The high-efficient heating lamps in 7 heating zones designed to condition preform heating temperature. The average power consumption can be down to only 6 – 9 KW for ordinary preform design.

The machine can stand with maximum blowing pressure up to 25 bars for different bottle requirements. The use of stainless steel air storage tanks for the low-pressure and high-pressure air supply ensure high-quality air for the bottle production and machine components.

WEI LI's ISBM Machines for PP Bottle

PP bottles are getting more and more popular for water jugs, sport bottles, baby feeding bottles, as well as hot-fill beverages, such as juice, tea, soy sauce and tomato sauce, because of the resin's ability to withstand high temperatures.

Hong Kong Office: Wei Li Plastics Machinery (H.K.) Ltd.

1212 Fo Tan Ind. Ctr., 26-28 Au Pui Wan St., Fo Tan, N.T. Hong Kong

Using *Wei Li's* WL-MP02 Injection Stretch Blow Moulding (ISBM) machines, PP bottles can be produced directly from PP perform with prefect neck finish, good in strength & great improved transparency compared with the extrusion blowing blowing process.

WEI LI in profile

WEI LI has more than 10 years experience in the development of PET/PP reheat stretch blow moulding technology, manufacturing stretch blow moulding machines of the "WEI LI" brand for PET, PP, PC, PMMA, PS, SAN bottles with volume ranges from 15ml to 20L. Apart from standard machines for PET bottles, the company's range includes specialized machines for PP, PC, PMMA, PS, SAN bottles. With production establishments in Foshan, China and a marketing office in Hong Kong, WEI LI is maintaining an effective market presence across the world.

The "SBM Team"

In Jan 2007, WEI LI established its "SBM Team" to provide hands-on and professional consultancy and sales support to manufacturers of Stretch Blow Moulding needs. Pooling the skills of experts in material supplier, preform injection, mould manufacturing, bottle production, the interdisciplinary team targets producers of packaging articles for the F&B, edible oil, cosmetic, pharmaceutical, household industries as well as manufacturers of screw caps and closures. With its SBM team, WEI LI offers orchestrated and total solutions based on ideal preform & bottle design, excellent machine building, high-performance moulds.
